

Atrium Evolution Series – Diversified Fund

AEF 7

29 February 2024

Growth of \$100,000 over 10 years

● Fund ● Objective

Performance

| | Fund | Objective |
|--------------------------|-------|-----------|
| Since inception (% p.a.) | 6.30% | 5.51% |
| 10 Years (%p.a.) | 5.24% | 5.13% |
| 7 Years (%p.a.) | 4.99% | 4.95% |
| 5 Years (%p.a.) | 4.85% | 4.93% |
| 3 Years (%p.a.) | 4.06% | |
| 1 Year | 7.08% | |
| 6 Months | 4.16% | |
| 3 Months | 4.74% | |
| 1 Month | 1.83% | |

Objective refers to the Return objective as stated in the Key Facts table.

Source: Atrium Investment Management. Performance shown as at the date of this report. Inception date is 24 June 2011. Past performance is not a reliable indicator of future performance. Future performance and return of capital is not guaranteed. Performance is after fees and costs and assumes re-investment of all distributions.

A rating is only one factor to be taken into account when deciding whether to invest.

Investment objective

To maximise returns while ensuring portfolio risk, or volatility, does not exceed 7% over a rolling three (3) year time period.

Investment strategy

The Fund has a Risk Targeted, multi asset investment strategy.

Atrium uses a dynamic, unconstrained approach to asset allocation providing flexibility to take full advantage of opportunities in the market and to mitigate downside risk.

The Fund may be invested in a broad universe of assets across multiple asset classes.

Atrium may also use derivatives to gain exposure to assets or asset classes more efficiently, for currency management, and to mitigate downside risk.

Key facts

| | |
|-------------------------|-----------------------------|
| Inception date | 24 June 2011 |
| Product code | COL0030AU |
| Investment strategy | Diversified - Risk Targeted |
| Volatility limit (p.a.) | 7.00% |
| Return objective | RBA Cash + 3.5% |
| Investment horizon | 5 years |
| Pricing | Weekly |
| Platform availability | Various |

Volatility & Sharpe Ratio

| | 10 Years | 7 Years | 5 Years | 3 Years |
|---------------------|----------|---------|---------|---------|
| Volatility (% p.a.) | 5.02 | 4.78 | 5.12 | 4.78 |
| Sharpe Ratio | 0.74 | 0.79 | 0.74 | 0.63 |

What is volatility?

Volatility measures the fluctuations, or changes, in the price of an asset or market index. Assets with higher volatility generally have greater price changes, both positive and negative, and so higher volatility is generally an indication of higher risk.

What is the Sharpe Ratio?

The Sharpe Ratio measures returns relative to the volatility, or risk, that was taken to achieve that return. The higher the ratio, the better the risk-adjusted performance has been - in other words, the investment risks taken have delivered better returns to the portfolio.

Asset allocation

| | |
|--------------------------|--------|
| ● Rates & credit | 11.49% |
| ● Cash | 14.09% |
| ● Australian equities | 13.68% |
| ● International equities | 28.60% |
| ● Listed infrastructure | 4.07% |
| ● Liquid alternatives | 19.65% |
| ● Private markets | 8.41% |

Atrium aims to achieve its investment objectives by investing across a range of asset classes on a global basis that provide exposure to different risk factors.

Each asset is included in the Portfolio for its ability to contribute to returns on a stand alone basis.

The investment universe comprises of 3 broad categories - Preservers, Growth Drivers and Diversifiers.

Preservers

Assets that protect the portfolio during periods of heightened equity market volatility and preserve capital, such as cash, government bonds and high quality investment grade bonds.

Growth Drivers

Assets that are expected to deliver higher rates of return over time with higher levels of associated volatility (risk). This predominantly comprises equities but also includes other assets that are highly correlated to equities such as listed property and infrastructure.

Diversifiers

Assets that generate additional real returns, with performance that is typically uncorrelated to the growth drivers and preservers within the portfolio. Importantly, they are a source of portfolio diversification away from equity market and interest rate risks, such as liquid alternatives and private markets.

Top holdings

| Holding | Weight | Asset Class |
|---|--------|---------------------|
| ANTIPODES GLOBAL FUND LONG UCITS CLASS S | 7.45% | Equities |

Market update

The month of February saw further strength in equity markets, being driven again by a very small number of extremely large US technology stocks. Bond yields rose as markets assumed the Federal Reserve may be slower to cut rates, following higher than expected inflation data.

The US equity market gained 5.3% for the month, driven by

- Further buying in technology-linked stocks, notably Nvidia as it posted very strong revenue growth for the fourth quarter.
- Easing financial conditions, as the cash rate seems to have peaked.

The Australian market generated +0.8%, driven by

- Mixed results in the earnings reporting period, and notably
- BHP declined after it wrote off its Western Australian nickel operations.

10-year bond yields rose as the market pushed out cuts in interest rates, following a higher-than-expected inflation print in the US, and rhetoric from central bankers making clear nothing can be expected before June at the earliest. Australian 10-year bond yields rose to a lesser extent.

The Australian dollar fell, as the US dollar rose, reflecting the higher interest rate expectations. Weighing on the Australian dollar were a weak iron ore price in February, along with the sustained decline in nickel and lithium prices.

Performance

The strong start to the new year in markets continued into February with global equities continuing to drive portfolio performance. In a month where investor sentiment was buoyed by the prospect of lower interest rates, global equity markets continued to test their records.

Pleasingly, the portfolio had a range of strong contributors to performance with liquid alternatives also driving performance over the month. Systematic macro strategies were higher on the back of both equity and commodity positioning, and we also saw positive contribution from currency manager P/E Global FX Alpha on the back of their US dollar positions.

Hyperion was the standout in the global equities sector as the “magnificent 7” mega cap US stocks (Apple, Microsoft, Google parent Alphabet, Amazon.com, Nvidia, Meta Platforms and Tesla) continue their onward march outperforming the broader market by over 5%. The fund has now delivered over 50% returns over the past 12 months. The Fairlight Global Small and Mid-Cap Fund was a laggard, as smaller stocks underperformed their larger counterparts. Our defensive listed infrastructure allocation also lagged in a strong market for risk assets.

Within domestic equities, the Atrium Equity Opportunities Fund, had a pleasing reporting season with solid performances from retailer Lovisa and recent addition WiseTech Global, while BHP was the largest detractor over February. The fund’s underperformance over the prior year has been analysed with negative factors coming from stock-specific decisions as well as the fund’s quality bias not being rewarded. Prior underperformance periods have been relatively short lived and we remain confident that the strategy is well positioned in high quality companies.

Portfolio changes

The risk of a “hard landing” recession in the US has reduced, and we have allowed our global equity exposures to drift higher. We continue to pivot the portfolio towards the segments of the equity market that exhibit better value – namely emerging markets and global small and midcap stocks. We continue to complete due diligence on a number of promising strategies in domestic small caps and liquid alternatives.

Outlook

Our positioning continues to reflect a cautious approach to asset allocation. In our view, inflation is likely to remain elevated above central bank targets which will place continued pressure on interest rates. Global markets have recovered strongly in anticipation of lower interest rates which has meant that many assets have, based on our analysis, moved into overvalued levels. This has led to some levels of complacency with the market consensus firmly in the “soft or no landing” camp, despite an apparent reacceleration in the US economy which could push out the timing of anticipated rate cuts and increase the chances of a further inflation spike – hence our caution on increasing equity exposure further.

In our view, with the market so strongly positioned for a buoyant economic environment, risk is often an afterthought. We see it as our role to position the portfolio to benefit from this environment, but also adjust for the factors that can drive market volatility. This should deliver the smoother return profile that is at the heart of our approach.
